

OCULUS QUEST SETUP GUIDE

BY EQUAL REALITY www.equalreality.com

WHAT'S IN THE BOX?

These are the item's you'll find in your Oculus Quest box.

Oculus Headset

2 x Touch Controllers

Power Adapter

Power Chord

Glasses Spacer

2 x AA Batteries

Reference Guide

Safety & Warranty Manual

STEP 1: EMAIL ALIASES

Setup an email alias for each Oculus Quest device

In this guide, we're assuming that you are setting up multiple Oculus Quest devices for your organization. Oculus makes this a little difficult, because you can only setup one device per Oculus Quest account.

If you only have 1 device, you feel free to skip this step and just create an Oculus account under your own company email address when we get to that step. If you have multiple devices (and/or are planning on buying more in the future) I'd recommend you be a bit more organized and systematic about how you setup email addresses, as each device will need its own email address.

The best option is to ask your IT department to setup a separate email address for each device, which is an alias of your own email address. When an email is sent to the alias email address, it will actually be sent to you. For example, if you setup an email oculus_1@yourcompany.com as an alias of angela@yourcompany.com, then any emails sent to the oculus_1 account will actually be sent to Angela's email account.

This will allow you to setup multiple Oculus Quest accounts (one for each device) using separate email addresses, but all of the emails will go to your email account (e.g. password change emails, confirmation emails, etc).

EXAMPLE

For example, let's say this is the scenario:

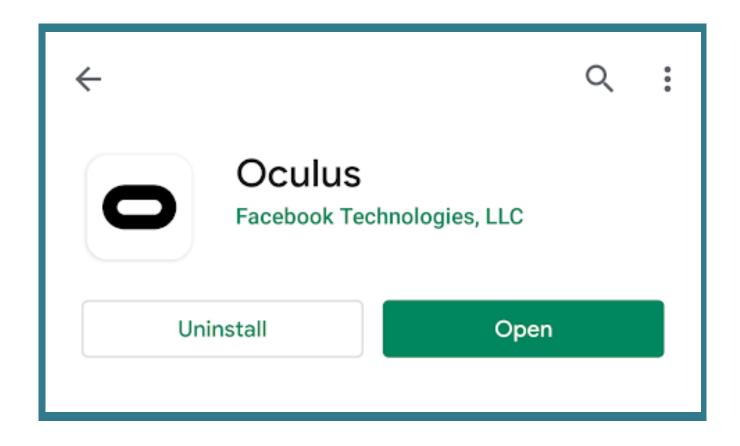

- You need to setup 5 Oculus Quest devices
- Your email is angela@yourcompany.com

Ask your IT department to setup 5 email addresses that are an alias of your email account, angela@yourcompany.com. These 5 emails might be:

- oculus_1@yourcompany.com
- oculus 2@yourcompany.com
- oculus_3@yourcompany.com
- oculus_4@yourcompany.com
- oculus_5@yourcompany.com

STEP 2: DOWNLOAD THE OCULUS APP

On your phone/tablet/other device, go to the app store and download the Oculus app.

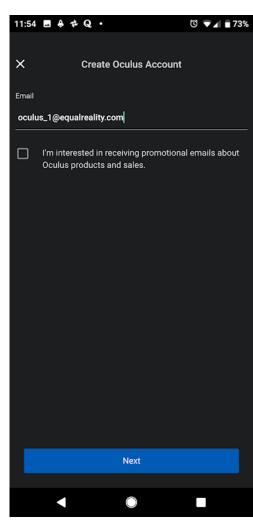

STEP 3: CREATE AN OCULUS ACCOUNT

You'll need to setup a new Oculus account for each headset

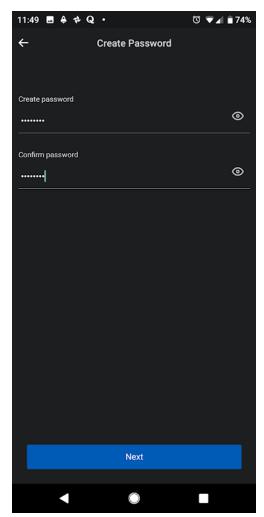

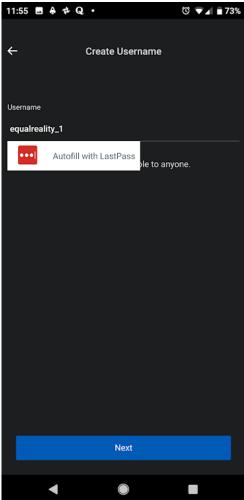

3.1 - Open up the Oculus app and select 'create new account'

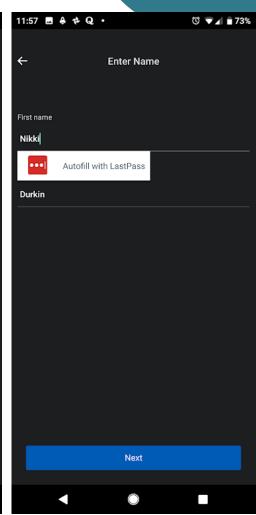

3.2 - Select 'Create Oculus account using email'

3.3 - Enter in the email you created for the device you are setting up. Each device will need its own email address.

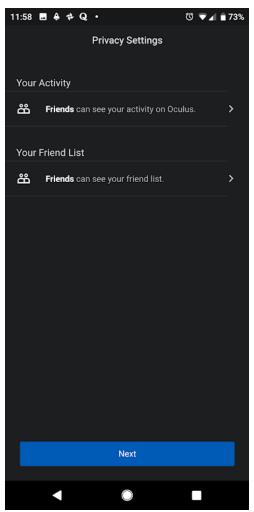

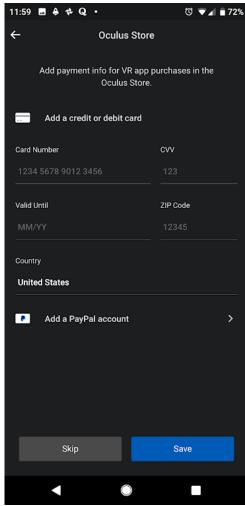

3.4 - Create a password. We recommend using the same password for all the Oculus devices you setup, just for simplicity. Make sure you remember what the password is, especially if you have different ones for each device!

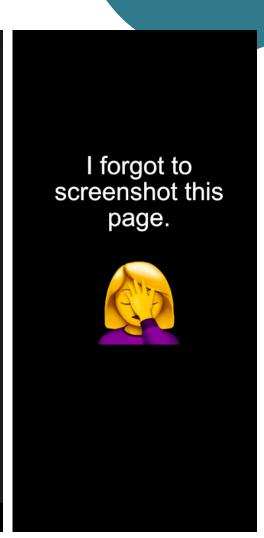

3.5 - Create a username. We recommend using a naming convention like companyxyz_1 for device #1, and companyxyz_2 for device #2. This will make things a lot easier to manage, especially as you get more devices in the future.

3.6 - Just put your name here. It doesn't really matter. You don't need a different name for each device.

3.7 - We recommend changing both of these settings to 'just you' for privacy. It shouldn't be a problem if you aren't connected to Facebook. Just tap on the option to change it.

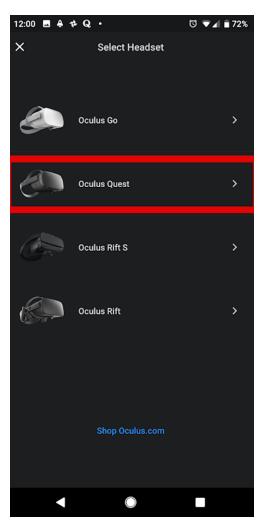

3.8 - You don't need to add a credit card. This is just for if you want to purchase games and apps from the Oculus store. If you don't intend to make purchases on the store, just skip this. You can setup a card later if you change your mind.

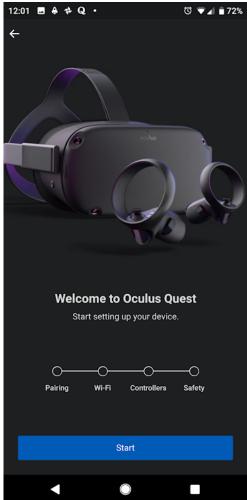

3.9 - You'll be asked to create a pin. This isn't super relevant unless you plan on making purchases, but its probably a good idea to select the same pin for each device you setup. Make sure you remember it or write it down.

STEP 4: SETUP THE OCULUS DEVICE

This step continues on from the previous one, now that the account has been created for the Oculus device.

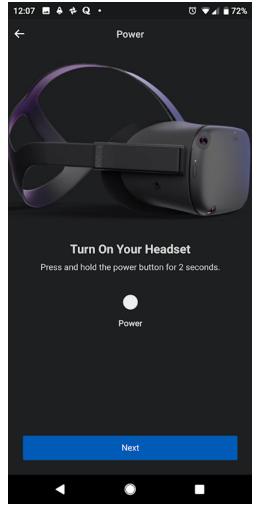

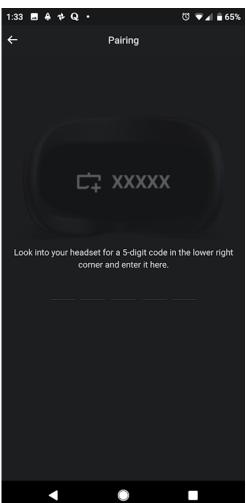

4.1 - Select the Oculus Quest option to start setting it up

4.2 - Click 'Start'

4.3 - Plug in your headset by following the instructions. You should see a yellow light show up on the side of your headset. Click 'continue'.

4.4 - Press and hold the power button for 2 seconds to turn the headset on.

4.5 - For this step, you will need to make sure Bluetooth is turned on on your phone.

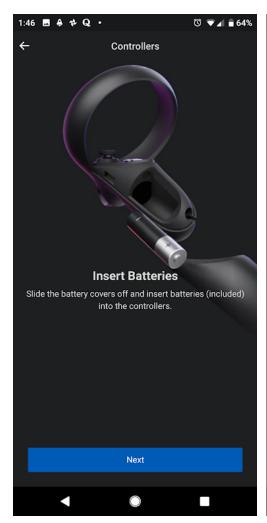

Place the headset on your head. Adjust the straps on the top and side until you can clearly read what is on the display. If the display looks blurry, then your straps aren't adjusted correctly.

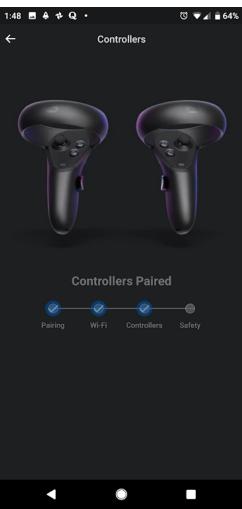

Once the headset is on, you should see a code displayed in the bottom right hand corner. Enter that code in your Oculus app.

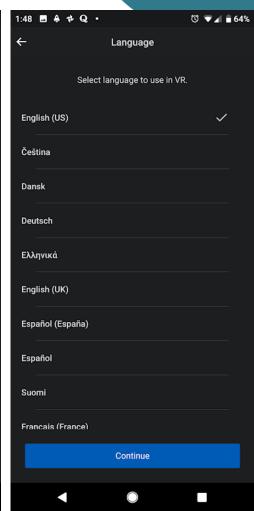

4.6 - 6. Choose a wifi network.

PLEASE NOTE: This step is unlikely to work properly on your company's wifinetwork if you work in a big organization and/or your network requires you to authenticate using an online webpage. Most organizations have firewalls and other things that will block devices such as the Oculus Quest from completing the installation in the next step.

You need to use a wifi network that you can just connect to without any bells and whistles e.g. your home network. We've gotten around this before when setting up multiple devices on a university campus. We set up a wifi hotspot on a phone, and just tethered our device to it. If you are unsure, go see your IT department and they may be able to complete the rest of the setup for you or get you sorted out.

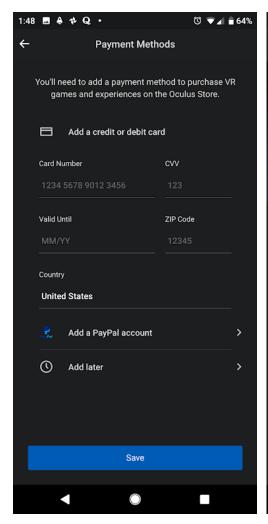

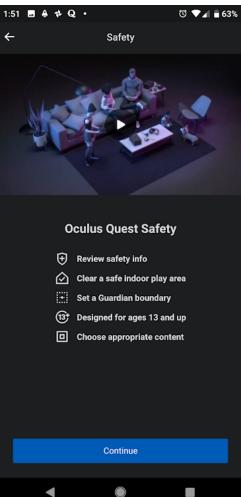

4.7 - Insert a battery into each controller, and press 'Next'.

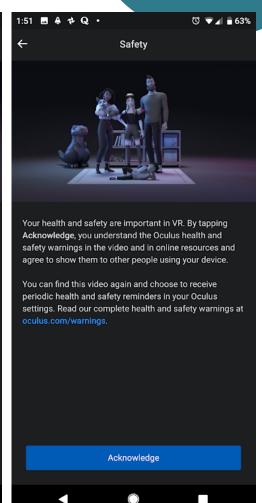

4.8 - Pair the controllers.

4.9 - Select the language.

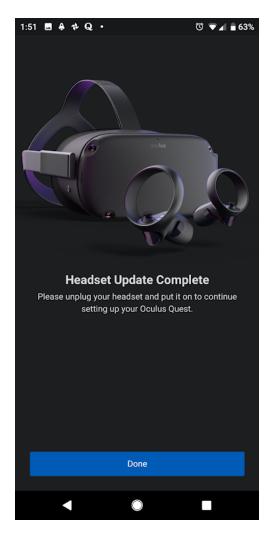

4.10 - Add a credit card if you want to make purchases on the Oculus store. Otherwise, select 'Add later'.

4.11 - Play the Oculus safety video. You'll have to play this video every time you setup a new device, as there is no way to skip it.

4.12 - Acknowledge the safety warning.

4.13 - Your headset is now all set up on the Oculus App. The instructions will tell you to put the headset on to complete setup, but we'll want to complete an extra step (turning on developer settings) before we do that.

STEP 5: SET UP DEVELOPER ACCOUNT

Set up your organization as a developer, so you can install the Equal Reality apps

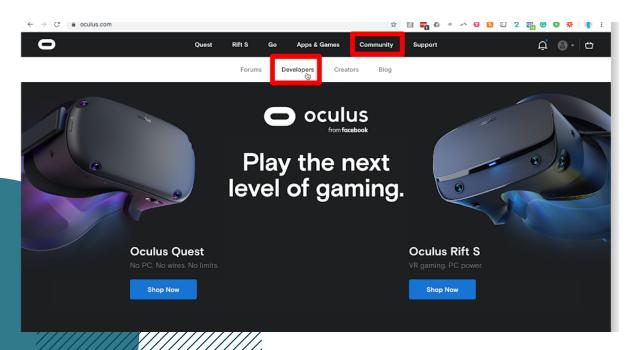

PLEASE NOTE: You only need to complete this step once. If you've already setup your organisation as a developer then you can move onto the next step.

Most Oculus Quest users will just be downloading VR apps from the Oculus store. If you want to use our Equal Reality apps, you'll need to have your organization setup as a developer, and then in the next step we'll be turning on developer settings for each Oculus device you setup.

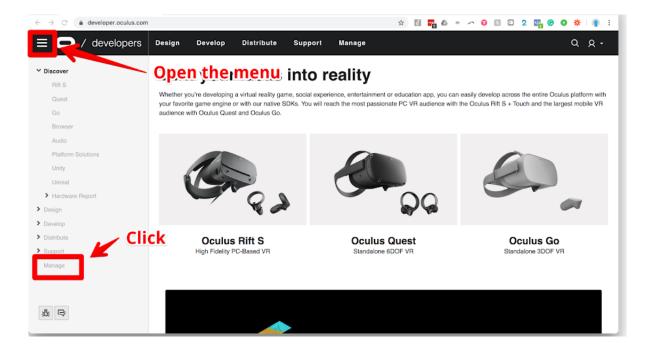

So, if you haven't setup your organization as an Oculus Developer, you'll need to do that. Ideally, you'll use your main Oculus account (i.e. the account attached to your first Oculus device - oculus_1@yourcompany.com) to setup your developer account. Once the developer account is setup, you'll be able to add additional oculus devices as developers under your organization. This means you'll have one organization, and multiple devices registered under that organization.

To setup your organization for the first time, follow these instructions:

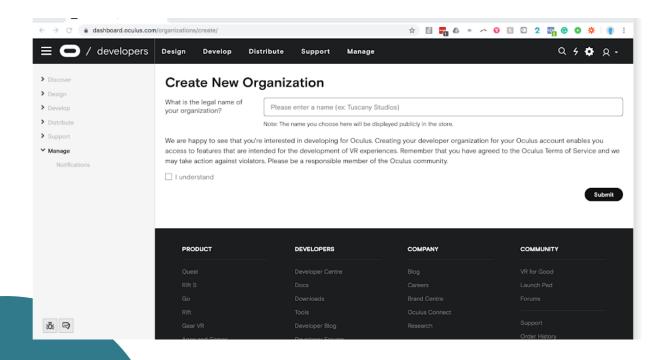

- **5.1 -** Go to Oculus.com
- **5.2 -** Login to the oculus account that you want to 'own' the organization. This should be your main Oculus account (e.g. oculus_1@yourcompany.com)
- **5.3 -** Once logged in, go to *Community > Developer*.

5.4 - Open the menu on the top left hand side then go to *Manage*.

5.5 - If you don't have an organization setup on this account, it will ask you to setup an organization. Go through this process.

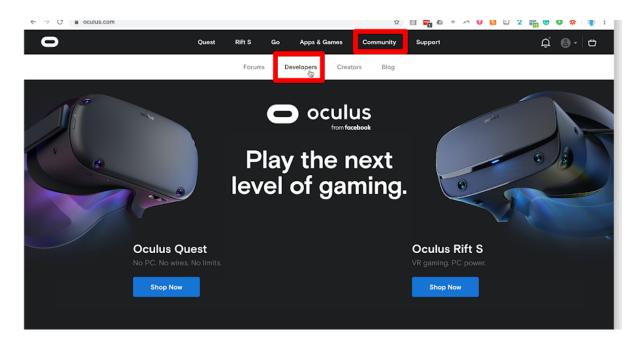

STEP 6: ADD THE OCULUS ACCOUNT AS A DEVELOPER

You'll need to add your new Oculus account as a developer of your organization, so you can install the Equal Reality apps.

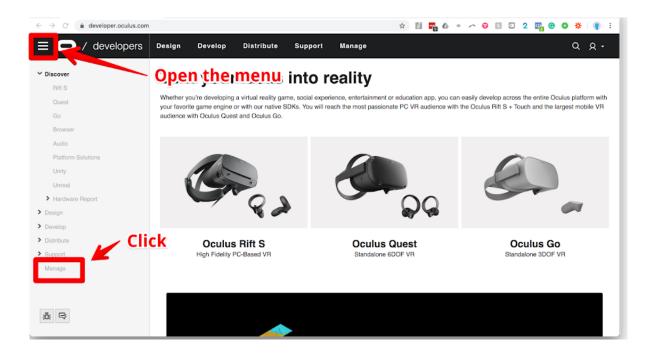

You should be logged into Oculus.com on a computer, under the Oculus account that setup your organization (e.g. oculus_1@yourcompany.com). I recommend just staying logged in on a computer under this Oculus account as you setup all your devices, as you'll need to add multiple new Oculus accounts under your organization

6.1 - Go to Community > Developers

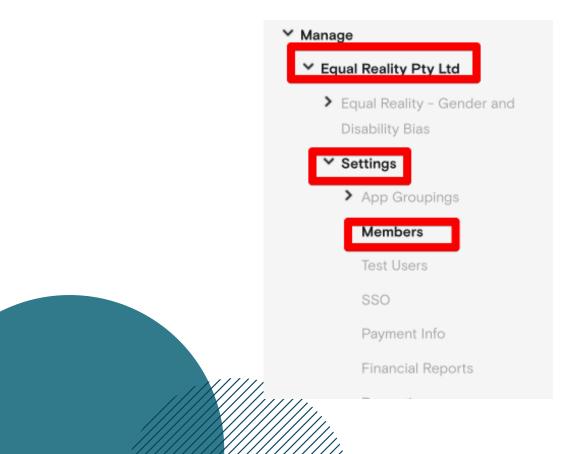

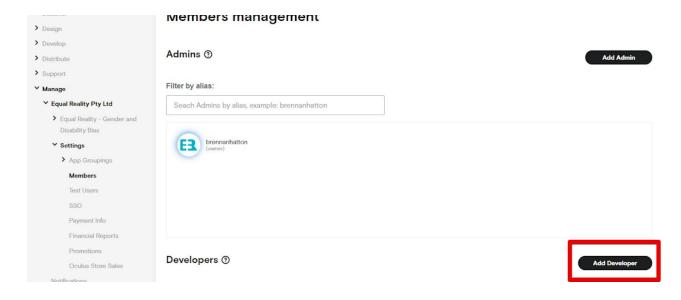

6.2 - Open the menu on the top left hand side then go to Manage.

6.3 - Your organization should be setup on the side, now. Go to *Manage > *Organization Name* > Settings > Members*

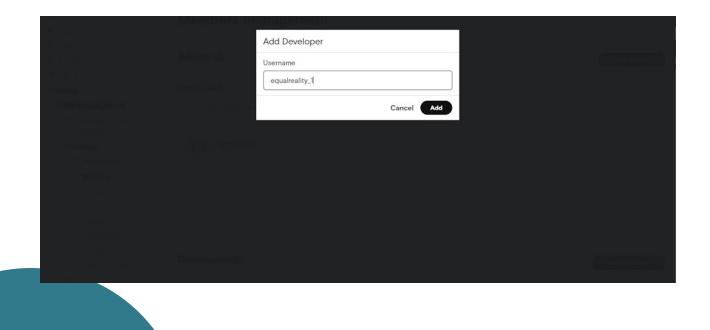

6.4 - Click 'Add developer'.

6.5 - Enter the username of the Oculus account you want to add as a developer.

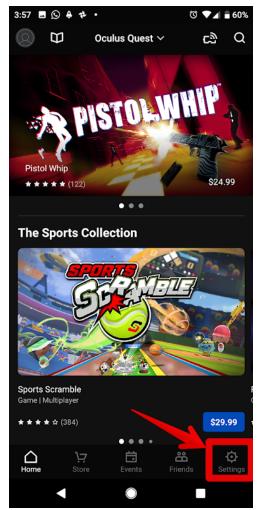

If you created your organization under, for example, the account called equalreality_1, then there is no need to add that username here. That account is already added as a developer.

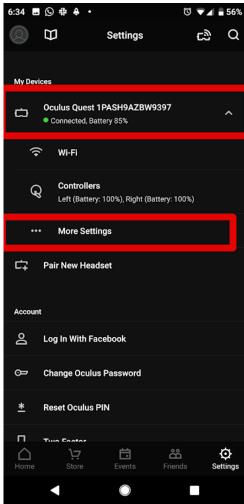

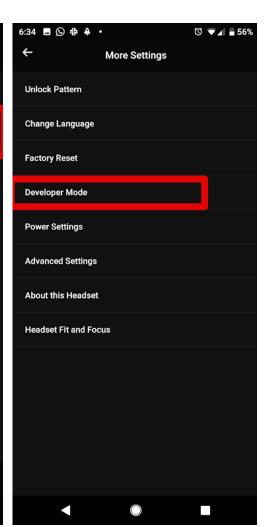

STEP 7: TURN ON DEVELOPER SETTINGS

Turn on the developer settings in the Oculus app

Now that you've added the device's Oculus account as a developer in your organization, you're ready to turn on developer settings within the Oculus app. Make sure you are still logged into the Oculus mobile app under the account you created in step 3 (i.e. the account associated with the particular Oculus device you are setting up).

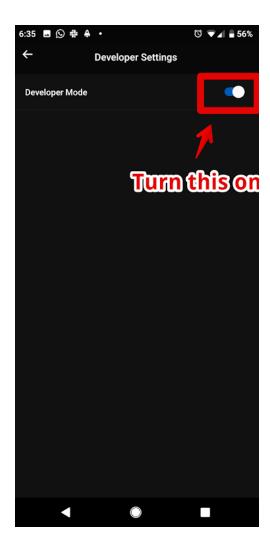

7.1 - On the main menu, select 'Settings'.

7.2 - Select your device > more settings.

7.3 - Select 'Developer mode'.

7.4 - Turn on the developer mode.

STEP 8: COMPLETE OCULUS SETUP IN THE HEADSET

Jump into your new Oculus headset and complete the final step!

The final step is to simply put on the Oculus headset and follow the instructions given to you. You will be shown how to adjust the device on your head, and setup the guardian (the barrier that defines your playspace).

Oculus will also put you through a VR tutorial so you can become familiar with using the Oculus Quest. You can exit out of it at any time by clicking the menu button on your controller.
